Dear Sir or Madam:

Subject: Tunnel and Reservoir Plan, Des Plaines Tunnel System, Annual
Groundwater Monitoring Report for 2019

Attached are three copies of "Tunnel and Reservoir Plan, Des Plaines Tunnel System,
Annual Groundwater Monitoring Report for 2019."

Very truly yours,

Albert E. Cox
Environmental Monitoring and Research Manager
Monitoring and Research Department

°C	degrees Celsius
CCD	Chicago City Datum
CFU	colony forming units
Cl ⁻	chloride
District	Metropolitan Water Reclamation District of Greater Chicago
EC	electrical conductivity
FC	fecal coliform
ft	feet
hr	hour
L	liter
m	meter
mg	milligram
mS	millisiemen
NH ₃ -N	ammonia nitrogen
SO ₄ ²⁻	sulfate
TARP	Tunnel and Reservoir Plan
TDS	total dissolved solids
Temp	temperature
TOC	total organic carbon

ANNUAL DATA FOR MONITORING WELLS

Introduction

All monitoring wells are located along the 13A extension, south leg, middle leg, and north leg of the Des Plaines Tunnel System ([Figure 1](#)). The monitoring wells were sampled based on the modified groundwater monitoring program for the Metropolitan Water Reclamation District of Greater Chicago's (District) Tunnel and Reservoir Plan (TARP) as briefly described below.

Modified Groundwater Monitoring Program

In a letter dated July 13, 2017, the Illinois Environmental Protection Agency accepted the modifications for the District's TARP groundwater monitoring program effective in January 2017 for a period of three years (2017 – 2019). Under the revised monitoring plan, nine wells (QD-27, -29, -30, -31, -33, -34, -36, -46, and -54), which had fecal coliform detected in 10 percent or more of samples during the period 1995 – 2013, will be sampled for four events of TARP tunnel fills, based on the water levels in the TARP following storm events (fill event-based). The criterion that triggers a fill event sampling is that the level of water in the TARP Mainstream tunnels reaches -150 ft Chicago City Datum (CCD). At each event, sampling is done weekly for three weeks. The samples collected during the first week of sampling were analyzed for all parameters in the original monitoring program, including: pH, temperature, electrical conductivity, total dissolved solids, hardness, ammonia, total organic carbon, chloride, sulfate, and fecal coliform. However, the samples from the second and third weeks are analyzed for only fecal coliform. Groundwater elevations in the monitoring wells are measured during each sampling event.

The other 31 wells associated with the Des Plaines Tunnel System are sampled once per year. These include six wells, QD-43, 47, 49, 53, 55, and 58, which were rehabilitated in 2017. These wells, including the six rehabilitated wells, had fecal coliform detected in less than 10 percent of samples during the period 1995 – 2013.

The monitoring well QD-25 was not sampled because of a well pump malfunction, and no annual sample was obtained for this report.

Summary of Data for Monitoring Wells

The analytical data for groundwater sampled during 2019 from fill event-based monitoring wells QD-27, QD-29, QD-30, QD-31, QD-33, QD-34, QD-36, QD-46, and QD 54, along with descriptive statistics, are presented in [Table 1](#). Physical characteristics, such as elevation, groundwater temperature, and estimated time of recharge for each well between initial drawdown and sampling, are also included. The fecal coliform data for groundwater sampled during 2019 from these monitoring wells, along with descriptive statistics, are presented in [Table 2](#). The analytical data for groundwater from 31 wells sampled once per year are presented in [Table 3](#).

	Maximum	1	21	1	

¹For values less than reporting limits, the reporting limits were used in calculation of descriptive statistics.

²NReq: Sampling is not required because the Fecal Coliform level was below detection limit in the previous week.

³Geometric mean is calculated.

¹Reporting limits changed to 0.3 mg/L on April 8, 2019, due to change in laboratory equipment.

²Relative to Chicago City Datum (579.48 ft above mean sea level) at intersection of Madison and State Streets.

³N/S: No samples obtained because well pump malfunction.
